OBJECTIVE

Passionate and diligent new graduate looking for a Full-time position of Software Development Engineer.

EDUCATION

University of Florida.

Gainesville, FL

Master of Science in Computer Engineering. GPA: 3.8/4.0.

Aug. 2016 – May. 2018

Beijing University of Posts and Telecommunications (BUPT).

Beijing, China

Bachelor of Science in Electrical Engineering. First Class Degree Honors.

Sept. 2012 – Jul. 2016

SKILLS

- Proficient with Java, familiar with C, Python, JavaScript.
- Hands on experience with Spark, Hadoop, Spring, Hibernate, Node.js, AngularJS, D3.js, Bootstrap, SQL, Redis, Linux, Amazon Web Services.

PROJECTS

Real-time Stock Data Analytics System

Nov. 2016 – Jan. 2017

Python, Spark, Kafka, Zookeeper, Cassandra, Redis, Node.js, D3.js, Docker

- Built a high-performance stock data processing platform. Applied Kafka to ingest the stock data from Google Finance, and calculated the average price of each stock every 3 seconds using Spark Streaming.
- Persisted the processed data in Cassandra and optimized data storage schema to speed up data query performance.
- Developed a dashboard web app using Redis, Node.js, D3.js and visualized the trend of the price of the stocks.
- Created a scalable deployment environment using Docker.

Student Information Management System

May. 2017 – July. 2017

Java, Spring, Hibernate, JSP, Servlet, JDBC, MySQL, Tomcat, Bootstrap

- Created and deployed a Spring MVC and Hibernate web app on Tomcat and have it interacted with MySQL database.
- Implemented the CRUD operations to list, search, add, update, and delete students' information.
- Accomplished the web app with Model-View-Controller design pattern, and interfaced the database with Object-Relational Mapping and Data-Accessor-Object design pattern.
- Used Bootstrap to create responsive and mobile-first front-end web pages.

A Compiler based on Java Virtual Machine

Jan. 2017 – Apr. 2017

Java, ASM Bytecode Manipulation Framework, JUnit

- Built a scanner to implement the lexical analysis of the input character stream.
- Accomplished a recursive descent parser to implement the syntax analysis and generated an abstract syntax tree.
- Implemented the semantic analysis and type checking using LeBlanc-Cook symbol table and visitor pattern.
- Utilized the ASM framework to generate the Java bytecode of the source code and ran it on Java Virtual Machine.

Interactive Earthquakes Data Visualization System

Feb. 2017 – Mar. 2017

Java, Processing, Unfolding Maps Library

- Collected and classified the live data of recent earthquakes around the world. Applied searching and sorting algorithms to manage the large data set.
- Demonstrated the earthquakes data on an interactive map using Processing and Unfolding Maps library, and built the interactive graphical program with Event-Driven programming.

EXPERIENCE

China Telecommunication Technology Labs, TD-LTE Terminal Protocol Testing Intern

Aug. 2014 – Sept. 2014

- Worked in the TD-LTE Terminal Protocol Laboratory. Tested the performance of microprocessors made by MediaTek.Inc.
- Tested the communication performance of the TD-LTE cell phones using Anite 9000 and 3GPP protocols.

HONORS AND AWARD

- The College of Engineering Achievement Award in University of Florida. Aug. 2016 and Jan. 2017
- Honorable Mention, Mathematical Contest in Modeling /Interdisciplinary Contest In Modeling(MCM). Feb. 2015
- Student member of the Institution of Engineering and Technology (IET). Nov. 2013 - present
